# **#CGMFORALL SOCIAL MEDIA CAMPAIGN WRAP REPORT**

March 2022

## Key points

## 01

The #CGMForAll social media campaign was a continuation of the advocacy work started with our petition to Parliament in 2019.

## 02

The campaign was created, resourced and managed entirely internally, with zero external spend.

## 03

The campaign was digital only, run on the website and social media. It had higher widespread engagement on social media than any other activity in the past year.

## Background

In December 2019 we presented a petition to Parliament, asking:

That the House of Representatives urge Pharmac to fund Continuous Glucose Monitors (CGM), GLP1 agonists including Bydureon, Byetta, Lyxumia, and Victoza, SGLT2 inhibitors including Forxiga and Jardiance, and DPP-4 inhibitors including Januvia, Onglyza, and Trajenta".

In response to feedback from us and others, Te Pātaka Whaioranga -Pharmac made the decision to fund two new medicines for New Zealanders who are at high risk of heart and kidney complications from type 2 diabetes. In June 2021 we presented our submission to the Health Select Committee.

In June 2021 we presented our submission to the Health Select Comm However, no new technology has yet been funded...

## Key numbers

Throughout March, we made headlines and kept the national conversation on diabetes and the need for funding.

**113,000** reached on our social media\*

| Diabetes NZ

We go without a lot due to the demanding expense of my CGM. - Jess

4,262 days living with this disease. And not a single thing I do doesn't have my diabetes being considered in the planning. - Evelyn

Living well with diabetes shouldn't be a luxury, only accessible to those who can afford it. - Ruby

I am one of the highest costing eye patients in NZ (46 eye injections \$2,000 each and Vitrectomy surgery \$10,000+. If CGMs were funded I can hand on my heart say all those costs could have been avoided.

@eilish.neeson

We can see which way her blood sugar level is heading which help prevents the horrific damage to her healthy body caused by high or low levels. (This can save a lot of suffering as well as health dollars). - Lisa and Patrick

l work outside in all weathers it has been very easy to use. -Jeremy

Just so I can afford my CGM device, we have had to let go of other things that are expenses and work out month to month how this 'life saving' (literally <sup>(C)</sup>) gadget can fit into our budget... the priority really is the certainty of my three children waking up to a Mum. - @renee t1 27,300 finger pricks in 8 years... We have been fortunate enough to allow him breaks from finger pricking by purchasing a CGM... but it is not a cost we are always able to factor in. -@ohleelaynz

•••

He plays guitar and it broke my heart when he said it was getting sore to strum because of having to prick his finger. -Ngaru

CGMs are not only LIFE CHANGING but also LIFE SAVING! It not only gives me the security of knowing I will wake up tomorrow but also that my kids will wake up to a mummy. - Ana

### •

### • • •

I don't want to have to choose between living independently and having good quality of life. - Dominic

• • •

[Our 11-year-old's] nerve endings are damaged with having to do fingerprick testing sometimes up to 7+ times a day which over a month would be around 196 finger pricks - @shari.r0se

It feels completely unfair that we have to shift all of our financials so that our boys can go to school, play rugby and soccer and hang out with their mates without second guessing if they have had enough to eat, need to inject themselves or have to stop and find help. - Tara

# Campaign page

## diabetes.org.nz/cgm-for-all

Our website was the home of the campaign. With more than 100 stories shared, we continue to receive and share further stories as more people join the campaign.

### **#CGMFORALL**

On 15 March 2022 we kicked off our social media campaign calling for CGMs (continuous glucose monitors) and FGMs (flash glucose monitors) to be publicly funded for everyone in Aotearoa who needs one.

Continuing on the momentum built by our petition November 2019 and the Health Select Committee hearing of the petition in June 2021, we took to social media to gather widespread support and visibility.

Using international data, produce an evidencebased campaign demonstrating the short and long term impact of public funding for continuous and flash glucose monitors

Our advocacy is ongoing. Our current target is the 2023 General Election. Working with key stakeholders, we will keep funding for diabetes technology at the forefront of the national health conversation.
